

LENOX

300W WHITE LED FRESNEL

The Lenox is a soft-edged spotlight with more control over beam angle than floods, but less control than profiles. It's electronically zoomable from 12° - 65° degrees with DMX. The Lenox can accommodate barn doors for glare reduction and beam shaping. Selectable and smooth 16-bit dimming curves make it comparable with older, traditional theater fresnels. It is a perfect fit in theaters, studios or other environments that require smooth, even washes of light.

FEATURES

- 300W 2-in-1 Cool White and Warm White LED
- 3200K - 5600K Variable White
